PopUp

The PopUp community table provides a compact surface for individuals or small groups in training areas, open office spaces, enclaves, and huddle rooms—even individual workstations. Its array of well-proportioned sizes, inviting top shapes, and two heights encourage impromptu collaboration and socializing. Create visual continuity with neutral finishes or contrast the design in your space with up to six surface specifications and an array of color options for a wide aesthetic range.

To offer inspiration, we've collected a few of our favorite ideas for designing your space with PopUp tables and hope this design guide will stimulate more of your own.

Individual Workspace

Serving as a home base for people in office environments, the individual workspace is the primary location for non-mobile workers during the day. Providing a PopUp table within the workstation or nearby offers ready access to a worksurface for impromptu collaboration or a place to step away from the desk and change postures.

Tips and tricks

PopUp table sizes are compact, making them ideal for individual and adjacent workstations, for collaboration or as a touchdown.

Bar- and counter-height options promote spontaneous interactions and changing postures.

Inviting top shapes—rectangle, oval, and racetrack—along with laminate or veneer surface choices and two edge options create a range of aesthetics.

Design PopUp to blend in with neutral colors or provide contrast within the color palette through elements such as the leg, foot rail, accent plate, and casters.

A vertical wire manager offers power to the worksurface.

Collaborative Area

Spaces where people come together to collaborate and brainstorm are often designed with interactive technology. Providing a variety of seating along with standing-height table options improves engagement and inspiration. Pair stools with PopUp tables for bar- and counter-height choices in the space.

Tips and tricks

Variety in worksurface sizes and shapes enables unique configurations that users can arrange themselves, especially when casters are specified.

Push tables together to expand group size and arrange the space according to activities and needs.

Choose counter-height tables for seated activities or bar-height with stools to give people the option to sit, perch, or stand.

Create a dual-tone look between top and edgeband to blend in or contrast with your design.

Include a vertical wire channel (leg-attached) when worksurface power is provided.

Community Space

An informal community space provides an area away from workstations where people can gather, whether to work or socialize. Pairing PopUp with lounge seating gives them variety and choice based on posture preferences and activities.

Tips and tricks

Create a tiered effect by placing bar- and counter-height tables behind lounge seating, offering users a place to perch, sit, or stand for short durations.

Every table includes a foot rail for good ergonomic support.

Include a bag hook for organization and convenient access to personal items off the worksurface.

Specify PopUp with casters to allow for easy rearrangement, letting people move tables where they need them.

The knife edge creates a more streamlined look with sleek lines.

Project Room

Team members working on long-term projects may require a dedicated space where they can focus, strategize, plan, and display ideas. A project room should include a variety of visual display options and mobile furniture that allows users to change posture and orientation throughout the duration of the project.

Tips and tricks

Support user engagement with PopUp height options and foot rail support.

Casters enable easy rearrangement as team members switch activity modes—from working solo to brainstorming and collaboration.

Inviting top shapes—rectangle, oval, and racetrack—change the landscape and address the needs of the team.

Specify foot rails and legs in different colors for aesthetic variation to contrast with worksurfaces finished with dual-tone edgebands.

Glides are an option when mobility isn't required.

Training Room

From presentations to group collaboration, today's training rooms are dynamic spaces where staying alert and inspired are key. PopUp tables are nimble enough to support engaged user postures while accommodating personal items with optional bag hooks for convenient access. The compact surface and option for casters encourage people to move around with flexibility for a variety of group activities.

Tips and tricks

Varying top sizes, including 18", 24", and 30" depths and 48" – 72" widths, address common training room planning modules.

Height options and foot rail support influence engagement by addressing posture variation.

Stable A-leg with casters encourages movement for collaborative spaces where reconfiguration is desired.

Accent plate blends in and matches foot rail for an integrated aesthetic.

Include a vertical wire channel (leg-attached) when worksurface power is provided—especially for a training room.
